Exercise 6
EE312 Spring 2013
TWO POINTS

There are a series of small problems/puzzles to solve contained in the Visual Studio project and the Exercise6.cpp file. Please solve Problems 1, 4 and 5 for today's exercise. The other two problems (2 and 3) are "extra" practice problems for you to use as you study for the next exam. You can create your answer to each problem using some kind of explanation (written in comments) and some code (written in correct C++ code, naturally).

Good luck!
